

The WAMP DAO

Articles of Organization

Preamble

The Web Application Messaging Protocol (WAMP) is an application messaging protocol that aims to free and shield application developers and decouple application code and application communication from the details of

- programming languages and run-times,
- networking infrastructures, protocols and serializations,
- deployments of application code to compute infrastructures (“distributed”),

and free and unbind application users and operators from operational dependencies between each other (“decentralized”).

In it’s most general form, a WAMP based application runs over a network of interconnected (via “Router-to-Router Links”) WAMP router nodes and operated by one or more node operators, and WAMP application clients connected to these nodes. The WAMP routers route and forward WAMP messages to provide a transparent view from the WAMP application clients with Remote-Procedure-Call and Publish-Subscribe messaging patterns to allow uniform and seamless integration of application components. This way, WAMP enables distributed and decentralized components of an application to act and work as a whole, removing limits and making boundaries invisible to application code developers. WAMP Clients, WAMP Routers and WAMP Applications can be controlled, owned and operated by and isolated between different parties but still integrate seamlessly.

WAMP enables self-sovereign use and hosting of the respective application resources by each party, and applications that are governed to be:

- a) open
- b) permissionless
- c) censorship-resistant
- d) decentralized
- e) trustless (non-custodial)
- f) privacy-respecting

Purpose

The Purpose of the DAO is:

1. To promote the use of blockchain technology and the WAMP token for the benefit of all of humanity;
2. to empower the WAMP community through education;
3. to support technological innovation and human creativity by leveraging the latent power of the WAMP community;
4. to expand the reach and accessibility of the WAMP token internationally;
5. to uphold the independence of the WAMP project to the extent permissible by international law;
6. to establish good governance of the Association for the continued development of the WAMP community projects;
7. to cooperate with relevant public or private organizations and authorities for the purpose of meeting development goals as defined by the users of the WAMP token;
8. to conduct all activities with the expressed purpose of promoting the elation and enjoyment of all WAMP token users;

The DAO has no profit purposes.
