

# Single-Instance Dominance Amplification Artifact (SDAA)

Common Name: The One Ring

Document ID: SDAA-ME-TA-REV9

Revision: 9.1

Prepared by: Arcane Materials & Power Systems Division

Classification: Unique Artifact – High Corruption Risk

Abstract: The Single-Instance Dominance Amplification Artifact (SDAA), commonly referred to as The One Ring, is a forged will-amplification device constructed from high-purity gold alloy infused with concentrated metaphysical intent energy. The artifact enhances the native capabilities of the bearer while introducing progressive cognitive and moral degradation. This document outlines material properties, energy amplification coefficients, behavioral impact modeling, and containment protocols.

# 1. Physical & Material Properties

The artifact appears externally as a plain gold ring. Spectral analysis reveals abnormal energy absorption characteristics and inscribed linguistic activation matrix visible only under elevated thermal conditions.

Property	Measured Value	Unit
Outer Diameter	21.6	mm
Mass	18.2	grams
Base Material	High-Purity Gold Alloy (>99.98%)	-
Thermal Inscription Threshold	> 250	°C
Energy Absorption Coefficient	0.98	Normalized 0–1
Magical Flux Density (Dormant)	4.2e6	Aether units/m³

## 2. Power Amplification & Influence Metrics

When worn, the SDAA amplifies inherent traits of the bearer through recursive will-enhancement feedback loops. Amplification is non-linear and proportional to baseline ambition and latent capability.

Parameter	Minimum	Nominal	Maximum	Unit
Will Amplification Factor	1.5×	3.2×	12×	Multiplier
Invisibility Threshold	0.75	1.0	1.2	Spirit-Phase Index
Dominion Radius	5	120	500	meters
Cognitive Intrusion Rate	0.02	0.15	0.60	Δ Influence/hour
Corruption Accumulation	0.1	0.8	2.5	Index units/day

### 3. Behavioral Degradation & Containment Protocols

Prolonged exposure results in psychological dependency, heightened paranoia, and increased susceptibility to remote influence by the artifact's originating will-source. Separation anxiety index rises exponentially after 72 continuous hours of wear.

Exposure Duration	Observed Effect	Severity Index (0–10)
< 1 hour	Mild sensory enhancement	1
1–24 hours	Increased ambition & secrecy	3
1–7 days	Obsessive attachment formation	6
1–6 months	Personality restructuring	8
> 1 year	Near-total will subsumption	10

WARNING: Destruction of the artifact requires exposure to extreme geothermal conditions exceeding 1,300°C in the location of its original forging. Conventional mechanical, chemical, or arcane disassembly methods are ineffective. Direct prolonged contact is contraindicated without cognitive shielding measures.
