

Online Data Table

County-level characteristics

Description

This table reports numerous county characteristics, compiled from various sources. These characteristics are described in eTable.

Note

Two variables constructed by the Census Bureau that measure local government expenditures contained in this data set are set to zero for all counties in New York City other than New York County (Manhattan). This is due to the unique fact that New York City spans multiple counties, and that New York City governmental spending originates in a single county. The two affected variables are `subcty_exp_pc` and `taxrate`.
